

Facility has four (4) flush gutter total confinement buildings with earthen storage used for flushing. The pump for the building flushing system is at the south end of the earthen storage. A small office building is located north of Building 1. A recently constructed freshwater impoundment is south of the earthen storage and is used as a water supply. Feed bins are located between buildings 1 and 2 as well as 3 and 4. Bugaboo Creek is located approximately 1-mile to the northwest of the facility.
